

Advanced Managed Security Services (MSS & MDR)

We realise that to achieve effective in-house information security management is a costly, resource-heavy exercise. Attempting to maintain best-practice security within the organisation can lead to expensive security incidents, access issues, and personnel strain.

IPSec's revolutionary suite of advanced managed security services provides your organisation with access to the expertise required to successfully protect information assets and to achieve the cyber security outcomes desired, 24 hours a day, 7 days a week, 365 days a year.

IPSec's advanced managed security services provide for 24 x 7 security solution management, performance monitoring, and security monitoring. IPSec is ready to assist you to achieve your desired information security outcomes, 24 x 7 x 365 with clear service levels and complete transparency.

The IPSec suite of advanced managed security services delivers the highest quality security management outcomes within an achievable operational expense. Your IT resources are released from the burden of security management tasks, freeing up their time to focus on what is most important in day to day information systems delivery.

Unlimited - Security monitoring and management all day, every day.

@Night - Monitoring and management during non business hours delivery.

On Demand - Assistance only when requested, but with a defined response time.

Basic - To assist with projects and scheduled activities.

## IPSec Guard

IPSec Guard is designed to provide your organisation with a 24 x 7 Security Operations Centre and SIEM monitoring your IT systems for indicators & evidence of information security breaches. IPSec Guard can receive all of your IT system log information; will process and correlate that information in real time identifying data and trends that may suggest an impending security threat; and will notify you when a potential threat warrants investigation and response.

## IPSec Monitor

IPSec Monitor provides your organisation with real-time operational monitoring of your information security solutions, 24 hours a day, 7 days a week, 365 days a year.

By monitoring your cyber security solutions for availability, performance, trends, operational alerts, and other related metrics your organisation can have the confidence that the monitored security solutions are capable of meeting the optimum performance desired.

## IPSec Manage

IPSec Manage provides your organisation with change management, diagnostic investigations, and maintenance (including patching) for your cyber security solutions, 24 hours a day, 7 days a week, 365 days a year.

This service enables your organisation to achieve peace of mind knowing it has access to leading information security solutions engineers for the implementation of operational configuration changes for your information security solutions, and to provide highly capable diagnostic resources able to identify and recommend mitigations to active operational or security issues.

## Flexible Service Levels

IPSec's suite of managed security services is supported by a sophisticated and flexible range of service levels, including:

**Unlimited** provides your organisation with a fixed-cost outcome delivered 24 hours a day, 7 days a week, 365 days a year.

**@Night** provides your organisation with the confidence of knowing a team of highly skilled and experienced security professionals is overseeing your cyber security outcome whilst your business-hours team is not in the office.

**On Demand** provides your organisation with the ability to gain access to Australia's leading information security solutions engineers when required and with a defined response time.

**Basic** provides you with access to skilled and experienced security solution engineers to suit the needs of your organisation's projects and other scheduled requirements.

## About IPSec

IPSec are specialists in Cyber Security; experts who know how to identify and mitigate risk to businesses.

IPSec offers a holistic offering from consulting with CEO's regarding their risk profile, to designing and implementing controls to mitigate the identified risks, to testing the effectiveness of controls.

IPSec is about mitigating risk by assessing vulnerabilities and threats, by designing and implementing customised security strategies, by managing execution and optimising results. IPSec are guardians of business confidence, providing high levels of protection and optimal assurance of an organisation's security posture.
